Badar Edge: Full Website Content Document

15 Oct 2026 · @rrr

This document gives the complete content for the new Badar Edge website: 14 pages plus booking, contact and legal pages, written in plain English for Pakistan and USA visitors. Every page ends in one action, **Book Free Call**. Items marked **[CONFIRM]** are facts or choices only you can supply; Section 17.6 lists them all.

1. Strategy: what this website must do

The website has one job: make a business owner feel "this company understands my problem" and then book a Free 15-Minute Strategy Call. Every page, headline and button supports that one action. It is not an information site.

Positioning

- **Who we are:** Badar Edge, the Problem-First Solutions Company. We are not a general agency that sells a menu of services.
- **Core line:** *Every business has problems. We solve the right ones.* (This line already appears in your solution guides, so it ties the site and the guides together.)
- **Our promise in one sentence:** Tell us the problem. We find the cause, then build the exact solution, whether that is design, development, marketing, automation or AI.
- **What makes us different:** Most agencies start with a service ("we do websites"). We start with the problem ("you are losing leads after the first call"). The service is chosen only after the problem is understood.

The three ways to work with us

The whole site is built around three Solution Types. A visitor should understand this in under 20 seconds.

Solution Type	What it is	Best for	Plain-words promise

Recommended Solutions	Our ready-designed systems: DealFlow, JobFlow, PatientFlow	Businesses in real estate, home services and clinics, or any business with a similar problem	"A proven system, built around your business."
Traditional Solutions	Any single service, from design and development to marketing and AI	Businesses that already know exactly what they need	"Tell us the service. We deliver it properly."
Custom Solutions	A solution designed from scratch after a diagnosis	Businesses with a problem that does not fit a package	"Tell us the problem. We build the solution."

The order on the site is Recommended, Custom, Traditional in the sales flow (see the Home page), because Recommended solutions convert best and Custom shows we are open to any problem. Traditional is placed third so we are not mistaken for a general agency, but it stays fully visible so visitors who want a plain service do not leave.

Who the site speaks to

The site must feel written for every industry and for both countries. We do this by speaking about problems that every business has, not about industry jargon.

- **The Established Owner:** Business is running but leaking money through missed leads, slow follow-up, weak systems. Wants fixes that work.
- **The Growth-Minded Owner:** Wants to scale. Needs more customers, better systems, or technology to handle growth.
- **The New Business:** Has an idea or a fresh launch. Needs a brand, a website and a first system, built right from day one.

Pakistan and USA visitors see the same promise. Details that differ (currency, channels such as WhatsApp, language, examples) are handled by the country switch described in Section 17.

The conversion path

1. **Recognise:** The visitor sees their own problem named on the Home page.
2. **Believe:** They see a clear method, honest proof, and a simple structure.

3. **Choose a path:** Recommended, Traditional or Custom, or "I am not sure" (which leads to the call).
4. **Act:** One button, repeated everywhere: **Book Free Call**.
5. **Pricing arrives after the call.** We do not show prices on the site. After the call we send a written proposal with details for the visitor's industry and country (PKR for Pakistan, USD for USA).

Voice and tone rules

- Plain English. Short sentences. No agency buzzwords such as "synergy", "holistic" or "cutting-edge".
- Talk about the visitor's problem first and about us second.
- Confident but honest. Never promise guaranteed results. Your own solution guides say results are goals, not promises; the website must match.
- Respectful of the customer's customer. In clinics and real estate we never suggest pressure tactics.
- Same warm, direct tone for Pakistan and USA. Only examples and small details change.

Items to confirm before this goes live

The current site states figures such as "60+ projects", "5.0 rating", "+48% average revenue growth" and "350+ workflows". I have **not** reused them as facts. Where a number would help, this document marks it as **[CONFIRM]**. Use only numbers you can prove. Also note the current site says "Free 30-minute Growth Audit" and "Free 48-hour Growth Audit"; this document uses your new offer, the **Free 15-Minute Strategy Call**, everywhere.

2. Sitemap: which pages to build and which to skip

The site has 14 pages at launch. It is small on purpose: every extra page is another place a visitor can get lost before booking a call.

#	Page	URL	Job of the page	Main button
1	Home	/	Name the visitor's problem, show the three paths, get the call	Book Free Call

2	Solutions (hub)	/solutions	Explain the three Solution Types side by side	Book Free Call
3	Recommended Solutions	/solutions/recommended	Present DealFlow, JobFlow and PatientFlow together	Book Free Call
4	DealFlow	/solutions/dealflow	Real estate lead-to-deal system	Book Free Call
5	JobFlow	/solutions/jobflow	Home services lead-to-job system	Book Free Call
6	PatientFlow	/solutions/patientflow	Clinic patient access system	Book Free Call
7	Traditional Solutions	/solutions/traditional	Show every service, design to AI	Book Free Call
8	Custom Solutions and Diagnosis	/diagnosis	Visitor describes any problem; we build the solution	Send My Problem, then Book Free Call
9	Industries	/industries	Make every industry feel the site is for them	Book Free Call
10	How We Work	/how-we-work	Show the Problem-First method	Book Free Call

11	Results	/results	Proof: case studies, testimonials, honest numbers	Book Free Call
12	Pricing	/pricing	Explain how pricing works, without showing prices	Book Free Call
13	About	/about	Who we are and why we work problem-first	Book Free Call
14	FAQ	/faq	Remove doubts before the call	Book Free Call

Supporting pages, not counted above: **Book Free Call** (/book-call), **Thank You** (/thank-you), **Contact** (/contact), **Privacy Policy** and **Terms**. Section 14 and 16 cover them.

Why these pages

- **Three solution pages plus a hub:** your three Recommended Solutions are your strongest assets. Each one has a full page so a real estate agent, a plumber and a clinic owner each land on a page written for them.
- **A /diagnosis page:** the Custom path needs its own door. A visitor with an unusual problem needs a place to describe it.
- **One Industries page, not many:** separate pages for every industry would be thin and hard to keep up. One page with a block for each industry works for launch.
- **A Pricing page with no prices:** visitors will look for it. If it does not exist they feel something is hidden. The page explains honestly why prices come after the call.

Pages we deliberately skip at launch

Page we skip	Reason
Separate Pakistan site and USA site	Doubles the work and splits search ranking. One site with a country switch is enough.

One page for each service (SEO, web design, AI, etc.)	Too many thin pages. All services sit on the Traditional page. Individual service pages can be added later for search traffic.
Price list or package table with amounts	You send pricing after the call, scoped to industry and country.
Portfolio gallery page	Merged into Results so proof sits in one place.
Meet the Team page	Put a short team section on About instead. Add a full page when the team is larger.
Careers, Shop, Login	Not needed to win clients.
Blog at launch	Valuable later for search traffic, but it will not help the first clients. Add Insights in phase 2 (see Section 16).

Main menu

Keep it to five items so nothing is hidden.

1. **Solutions** (opens a short menu: Recommended, Traditional, Custom / Diagnosis; then DealFlow, JobFlow, PatientFlow)
2. **Industries**
3. **How We Work**
4. **Results**
5. **About**

To the right of the menu: a country switch (PK / USA) and a solid **Book Free Call** button that stays visible on every page and while scrolling on mobile. FAQ, Pricing, Contact and legal pages live in the footer.

3. Global elements: what appears on every page

Call-to-action rules

- The only primary button on the whole site is **Book Free Call**. Its longer form is **Book Your Free 15-Minute Strategy Call**.
- The only secondary button is **Tell Us Your Problem** (goes to /diagnosis). It is for visitors who are not ready to book.
- Every page ends with the same closing block (below) so a visitor never reaches a dead end.
- Under every Book Free Call button, show one small line: *No cost. No commitment. 15 minutes.*

Header

- Logo: Badar Edge
- Menu: Solutions, Industries, How We Work, Results, About
- Country switch: a small toggle showing **PK** and **USA**. On first visit, choose the country from the visitor's location and let them change it.
- Button: **Book Free Call**
- On mobile: the button stays fixed at the bottom of the screen while scrolling.

Country switch: what changes

The switch changes only what must change. The promise, structure and design stay the same.

Element	Pakistan view	USA view
Contact option beside the button	WhatsApp is shown first	Phone and email are shown first; WhatsApp is secondary
Language notes	"English, Urdu and Roman Urdu supported"	"English; Spanish support on request" **[CONFIRM]**
Examples inside copy	Property projects, clinics, WhatsApp inquiries	Brokerages, HVAC and plumbing, clinic groups

Pricing line	"Quoted in PKR, scoped for the local market"	"Quoted in USD"
Call time options on booking page	Pakistan time	US time zones

Do not show a US price converted into PKR. Your guides say Pakistan fees are scoped locally and not converted.

Trust strip (under the main hero on Home, smaller elsewhere)

One row of four short promises. Each one must be true before it is shown.

- **Problem first.** We diagnose before we sell.
- **You own everything.** Your accounts, your data, your assets. **[CONFIRM: the current site says "no lock-in"]**
- **Honest reporting.** We report outcomes, not activity.
- **Real people.** A person handles every important conversation.

Closing call-to-action block (every page)

Heading: Not sure where your problem starts? Let's find it.

Text: In 15 minutes, we listen to your business, name the problem that matters most, and tell you honestly whether and how we can help. No pitch. No pressure.

Buttons: Book Free Call | Tell Us Your Problem

Footer

- **Short line:** Badar Edge. The Problem-First Solutions Company. *Every business has problems. We solve the right ones.*
- **Column 1, Solutions:** Recommended Solutions, DealFlow, JobFlow, PatientFlow, Traditional Solutions, Custom Solutions
- **Column 2, Company:** About, How We Work, Results, Industries, FAQ
- **Column 3, Start here:** Book Free Call, Tell Us Your Problem, Pricing, Contact
- **Contact line:** WhatsApp, email, and social links (LinkedIn, Instagram) **[CONFIRM: addresses and numbers]**
- **Bottom row:** Privacy Policy, Terms, copyright, country switch

Do not list payment methods such as crypto platforms in the footer. They do not help conversion and can make a USA visitor uneasy. Share payment options only inside the proposal.

Floating contact button

Pakistan view: a round WhatsApp button, bottom right, opening a chat with the pre-filled message *"Hi, I'd like to talk about a problem in my business."* USA view: a round chat button that opens the booking calendar.

4. Home page (/)

Goal: In 10 seconds the visitor knows we solve business problems. In 60 seconds they know which path fits them. Then they book.

Section 1: Hero

Small label above the headline: The Problem-First Solutions Company

Headline: Every business has problems. We solve the right ones.

Sub-headline: Tell us what is holding your business back. We find the real cause, then build the exact solution, whether that needs design, development, marketing, automation or AI. For businesses in Pakistan and the USA.

Buttons: Book Free Call | Tell Us Your Problem

Line under buttons: Free 15-minute strategy call. No cost. No commitment.

Visual idea: A simple picture of a tangled line becoming a straight line. No stock photos of people shaking hands.

Section 2: Trust strip

Use the four promises from Section 3.

Section 3: "Sound familiar?"

Heading: Different businesses. The same problems.

Intro: Whatever you sell, one of these is probably costing you money right now.

- **Customers contact you, but few become paying clients.** Calls go unanswered, messages wait, follow-up depends on memory.
- **Enquiries come from everywhere and nobody owns them.** Phone, WhatsApp, forms, social media, referrals. No single view.

- **You pay for marketing and cannot tell what works.** Clicks and followers go up. Clients do not.
- **Your website looks fine but brings no business.** Visitors arrive, look around and leave.
- **Too much work is done by hand.** The same questions, the same data entry, the same reports, every day.
- **You are growing and your systems cannot keep up.** More customers are making things worse, not better.
- **You are just starting.** You need a brand, a website and a first system, built right the first time.

Closing line: Seven different symptoms. One cure: name the real problem first.

Section 4: Why problem-first

Heading: Most agencies sell you a service. We start with your problem.

A typical agency	Badar Edge
Starts with what they sell	Starts with what is going wrong in your business
"You need a new website"	"Let's find out where you are losing clients, then decide what to build"
Measures activity: posts, clicks, hours	Measures outcomes: conversations, bookings, jobs, deals
Hands over a deliverable and moves on	Stays to improve it after launch
One service, one specialty	Design, development, marketing, automation and AI under one roof, used only when needed

Section 5: Three ways to work with us

Heading: Choose the way that fits your business.

Intro: Not sure which? Book the call and we will help you choose.

- **Recommended Solutions.** *Our ready-designed systems, built around your business.* Right now: DealFlow for real estate, JobFlow for home services, PatientFlow for clinics. Button: See Recommended Solutions
- **Custom Solutions.** *Your problem does not fit a box? Tell us. We build the solution.* Describe any business problem and we design a solution from scratch. Button: Tell Us Your Problem
- **Traditional Solutions.** *Know exactly what you need? Choose the service.* Everything from branding and web design to software, marketing, automation and AI. Button: See All Services

Section 6: Recommended Solutions spotlight

Heading: Three systems we have already designed.

Intro: Each one fixes the point where a business loses the most money: the gap between "someone showed interest" and "someone became a client".

Solution	Built for	Line	Link
DealFlow	Real estate agencies, developers, brokerages	Stop Losing Leads. Start Closing Deals.	Explore DealFlow
JobFlow	Home service companies: HVAC, plumbing, electrical, roofing and more	Every Missed Call Is a Missed Job.	Explore JobFlow
PatientFlow	Clinics and medical practices	Turn Patient Demand Into Treatment.	Explore PatientFlow

Line under the cards: Your business is different? The same thinking applies. [Tell us your problem.]

Section 7: Everything a business needs, in one place

Heading: If your business needs it, we can build it.

Intro: We are not a one-trick agency. But we never sell a service just because it exists. We use the right tool for the problem we found.

Show six simple tiles. Each tile links to the Traditional Solutions page.

- **Brand and design:** identity, logo, websites, user experience
- **Development:** websites, web apps, mobile apps, custom software
- **Marketing and growth:** search, social, paid ads, content
- **Sales systems:** CRM, lead routing, follow-up, reporting
- **Automation and AI:** workflows, AI assistants, smart reporting
- **Data and insight:** dashboards, tracking, business intelligence

Section 8: How it works

Heading: From first call to working solution.

1. **Talk.** A free 15-minute call. You describe the problem. We listen.
2. **Diagnose.** We study how your business actually works and find the leak that costs most.
3. **Propose.** You get a written recommendation with scope and pricing for your industry and country.
4. **Build and improve.** We build it, launch it, and keep improving it with real numbers.

Button: See How We Work

Section 9: For every industry

Heading: Built for your industry, or for yours specifically.

Text: We work with real estate, home services and clinics every day. We also help ecommerce, education, hospitality, professional services, manufacturing, startups and more. If your business has customers and a process, it has problems we can solve.

Button: See Industries

Section 10: Proof

Heading: What changes when the right problem gets solved.

Show two or three short case stories and two client quotes. Use **only real results you can document [CONFIRM]**. The current site mentions results for a dental clinic, a real estate team and an ecommerce brand. Use them only if the figures and the client permission are on file. Format each story as: Problem, What we built, What changed, Time taken.

Button: See All Results

Section 11: What happens on the call

Heading: Fifteen minutes. No pitch.

- We ask about your business and what is not working.
- We tell you honestly where the biggest problem seems to be.
- We tell you which type of solution would likely fit, or that we are not the right fit.
- Afterwards we send you a written proposal with pricing for your industry and country. You decide in your own time.

Section 12: Short FAQ

Show four questions with answers from the FAQ page (Section 15): *What does the call cost? Do you only work in some industries? Will you tell me prices on the call? What if my problem is not on your list?*

Section 13: Closing call-to-action

Use the standard closing block from Section 3.

5. Solutions hub page (/solutions)

Goal: Help the visitor pick the right path in under a minute. This page is the map. The detail lives on the pages it links to.

Hero

Headline: Three ways to solve your business problem.

Sub-headline: Whether you want a proven system, a service, or a solution built from scratch, it starts the same way: with your problem, not our price list.

Buttons: Book Free Call | Tell Us Your Problem

The three Solution Types

Show three large cards side by side (stacked on mobile). Each card has the same layout: name, one-line promise, who it is for, what you get, button.

1. Recommended Solutions

- **Promise:** A proven system, built around your business.
- **Who it is for:** Businesses with a common, costly problem we have already studied closely. Today: real estate, home services and clinics.
- **What you get:** A ready-designed system with a clear method, a clear scorecard and a clear way to improve. We adapt it to your team, your city and your tools.
- **Button:** See Recommended Solutions

2. Custom Solutions

- **Promise:** Tell us the problem. We build the solution.
- **Who it is for:** Any business with a problem that does not fit a package. Any industry.
- **What you get:** A diagnosis of your problem and a solution designed only for you.
- **Button:** Tell Us Your Problem

3. Traditional Solutions

- **Promise:** Tell us the service. We deliver it properly.
- **Who it is for:** Businesses that already know what they need: a brand, a website, an app, a campaign, an AI tool.
- **What you get:** Any single service from design and development to marketing and AI, delivered by specialists.
- **Button:** See All Services

"Which one is for me?" guide

Heading: Quick guide

If you say this...	Start here
"I sell property." / "I run an HVAC, plumbing or roofing company." / "I run a clinic."	Recommended Solutions
"Customers contact me but few of them buy."	Recommended Solutions, or Custom if your industry is different
"I have a strange problem. I cannot explain it neatly."	Custom Solutions
"I need a website, an app or a brand."	Traditional Solutions
"I want to automate the boring parts of my business."	Custom or Traditional, depending on how defined it is

"I am starting a business."	Traditional (brand and website) or Custom (full launch plan)
"I honestly don't know."	Book Free Call. This is exactly what the call is for.

How the three connect

Heading: You are never stuck in one box.

- A Recommended Solution uses Traditional services as its parts (a website, a CRM, an AI assistant) but only when the diagnosis shows they are needed.
- A Custom Solution can start from a Recommended one and change it to fit.
- A Traditional project can grow into a Custom or Recommended solution when the real problem turns out to be bigger than the service you came for.

Closing block

Use the standard closing call-to-action from Section 3.

6. Traditional Solutions page (/solutions/traditional)

Goal: Show the full range of services so no visitor thinks "they probably cannot do what I need". Keep the problem-first message so we are not mistaken for a general agency.

Hero

Headline: Know what you need? We will deliver it properly.

Sub-headline: From design and development to marketing, automation and AI. Every service is delivered by specialists and tied to a business result, not a deliverable list.

Buttons: Book Free Call | Tell Us Your Problem

Our one rule, even for single services

Heading: Before we build anything, we ask: what problem should this solve?

Text: A beautiful website that brings no clients is a failure. An AI tool nobody uses is a failure. So even when you come to us for one service, we spend the first conversation making sure it

will actually fix something. Sometimes we confirm you are right. Sometimes we save you money by recommending something simpler. Either way you leave with a clear plan.

Every service, grouped by the problem it solves

Group	Services	The problem it solves
Brand and design	Brand identity, logo design, brand guidelines, website and app design (UI/UX), graphic design, pitch decks, print and packaging	"We look small, unclear or untrustworthy."
Websites and development	Business websites, landing pages, ecommerce stores, web apps and customer portals, mobile apps, custom software, integrations, maintenance	"Our website does not bring business" or "We need a tool that does not exist yet."
Marketing and growth	Search engine optimisation (SEO), local search and Google Business Profile, paid ads (Google, Meta, LinkedIn), social media, content and video, email and WhatsApp marketing	"Not enough of the right people know about us."
Sales systems	CRM setup, lead capture, lead routing, call tracking, follow-up workflows, pipeline reporting	"Leads come in but we lose them."
Automation and AI	Workflow automation, AI chat and voice assistants, AI lead qualification, document and data processing, AI-assisted reporting, custom AI agents	"Our team wastes hours on repeat work."

Data and insight	Tracking and analytics setup, live dashboards, business intelligence, conversion reporting	"We cannot see what is working."
Strategy and advice	Growth review, go-to-market plan, process review, launch planning for new businesses, technology roadmap	"We do not know what to do first."
Support and improvement	Monitoring, maintenance, ongoing optimisation, team training	"It was built, and then nobody looked after it."

On the live page, each group is a card that opens to show the services and a short two-line description of each. Every card ends with a **Book Free Call** button.

A note on AI

Add a short, honest block because visitors are cautious about AI.

Heading: AI that helps your team, not AI that replaces your judgment.

Text: We use AI to answer common questions, sort enquiries, draft messages and save hours of manual work. A trained person always checks anything important, and we never let AI invent facts about your products, prices, services or clients.

How a Traditional project works

1. **Free call.** You tell us what you need and why.
2. **Quick check.** We test whether it will solve the real problem. We tell you honestly if something else would work better.
3. **Written proposal.** Scope, timeline and price for your industry and country (PKR or USD).
4. **Build.** Regular updates. You see work before it is final.
5. **Launch and handover.** You own everything. We can keep improving it if you want.

Not sure which service you need?

Text: That is common and it is fine. Describe the problem instead. Button: Tell Us Your Problem

Closing block

Use the standard closing call-to-action from Section 3.

7. Recommended Solutions: hub page and three solution pages

These four pages carry the most sales weight. The copy below is built from your five solution guides, simplified into website language. The guides remain the source for the detailed proposal that follows the call.

All three solutions share one structure so a visitor who reads one page already understands the others: **Problem, What we look at, What you get, How it works, What we measure, Who it is for, Closing call-to-action.**

7.1 Recommended Solutions hub (/solutions/recommended)

Headline: Three systems for the moment someone shows interest and your business has to respond.

Sub-headline: DealFlow, JobFlow and PatientFlow are ready-designed systems that turn enquiries into deals, jobs and appointments. Each is adapted to your team, your market and your tools.

Buttons: Book Free Call | Tell Us Your Problem

Section: What these systems have in common

- **They start with a diagnosis.** We study how enquiries really move through your business before we change anything.
- **They fix the process first, then the tools.** A new website, CRM, ad campaign or AI tool is added only when the diagnosis shows it is needed.
- **A person stays in charge.** Automation handles reminders, sorting and routing. People handle advice, negotiation, urgent matters and exceptions.
- **They are measured.** You see numbers that matter: conversations, bookings, jobs, deals. Not just clicks.

Section: Pick your system

System	Built for	Its promise	Link

DealFlow	Real estate agencies, developers, brokerages and agents	Stop Losing Leads. Start Closing Deals.	See DealFlow
JobFlow	HVAC, plumbing, electrical, roofing and other home service companies	Every Missed Call Is a Missed Job.	See JobFlow
PatientFlow	Independent clinics and multi-location practices	Turn Patient Demand Into Treatment.	See PatientFlow

Section: Three levels in every system

Show the same three levels on each page so visitors can place themselves without seeing a price.

Level	In plain words
Foundation	One team, one location or one clear problem. We fix the biggest leak first.
Growth	Several lead sources or services. We add better follow-up, reporting and monthly improvement.
Scale	Many teams, locations or a high volume. We add routing, deeper connections and coordinated improvement.

Section: Your business is not on the list?

Text: These are the systems we have designed so far. Many businesses lose clients at the same point: between "I'm interested" and "I'm a customer". If that sounds like you, tell us. We will build a Custom Solution using the same method.

Button: Tell Us Your Problem

7.2 DealFlow page (/solutions/dealflow)

Label: Recommended Solution for Real Estate

Headline: Stop losing leads. Start closing deals.

Sub-headline: The lead-to-deal system for real estate agencies, developers, brokerages and agents. Turn every inquiry into a real conversation, a visit and a deal.

Buttons: Book Free Call | Tell Us Your Problem

Section: The problem

Heading: Interest is arriving. Deals are not.

Text: Inquiries come from portals, Google, Facebook and Instagram, WhatsApp, phone calls, open houses and referrals. They land in different inboxes and on personal phones. One person replies in minutes, another tomorrow. A buyer asks about a property that is already gone. A seller never hears back after asking for a valuation. You see lead numbers, but not which source creates visits and deals. Spending more on ads does not fix this. It adds more leads to a leaking process.

Section: What we look at first

- Who owns each new inquiry, and what happens when that person is busy?
- How fast does the team reply, including evenings and weekends?
- Is current availability and pricing checked before it is published?
- What counts as a serious buyer or seller, a booked viewing, a signed client?
- Which sources bring real conversations and deals, not just form fills?

Section: What you get

Your problem	What DealFlow puts in place
Buyers cannot get basic details quickly	Mobile-friendly project or listing pages with checked, current information
People cannot find you locally	Accurate Google Business Profile, local search and listing presence

Messages are split across staff	One shared inbox or CRM, with the source of every inquiry recorded
Follow-up depends on the person	Clear ownership, callback reminders, escalation when no one responds
Your team asks the same questions again and again	A short qualification guide: area, property type, budget, timing, contact preference
You cannot see what works	Reports from inquiry to conversation to visit to deal, by source and by agent

Section: How it works

1. **Discover.** We map your sales journey, channels, roles and reporting, and find the most expensive leak.
2. **Design.** We agree on ownership, qualification, follow-up pace and your scorecard. We choose only the tools you need.
3. **Implement.** We set up pages, inbox or CRM, routing, reports and a simple playbook for your team. We test with real scenarios before launch.
4. **Improve.** Every month we review the numbers with you, coach the process, and move effort to what works.

Section: What we measure

How quickly inquiries get a first response. How many become real conversations. How many become booked viewings or site visits. How many become reservations, offers or closed deals. Which sources and which people produce them. We set a baseline from your last 30 to 90 days, then agree targets together. Results are goals, never promises.

Section: Built for how you actually work

- **Pakistan:** City- and project-aware inquiry handling. WhatsApp, calls, portals and social inboxes in one view. English, Urdu or Roman Urdu where your buyers prefer it. Support for site visits and installment-plan questions, with project facts checked by your responsible team.
- **USA:** Built around your brokerage, team or agent structure. Buyer and seller journeys, viewings and consultations, listing and disclosure review, and reporting by source and agent.

(The page shows the block that matches the visitor's country; the other is available through a small toggle.)

Section: Our standards

- A person handles investment questions, negotiation, project verification and exceptions.
- AI may help sort or draft messages only with your approval, and a person checks every fact. We never let AI invent property details.
- We cannot establish legal title or approvals. Your team confirms these before anything is published.

Section: Who it is for

A founder, project lead or sales manager with a team that handles inquiries. You bring current inventory, approved information and a team willing to follow the process. We bring the rest.

Closing: Standard closing block, with the line *Foundation, Growth and Scale options. Pricing sent after your free call, in PKR or USD.*

7.3 JobFlow page (/solutions/jobflow)

Label: Recommended Solution for Home Services

Headline: Every missed call is a missed job.

Sub-headline: The lead-to-job system for HVAC, plumbing, electrical, roofing and other service businesses. Turn calls and requests into scheduled, completed and profitable jobs.

Buttons: Book Free Call | Tell Us Your Problem

Section: The problem

Heading: You are busy. You are still losing work.

Text: The phone rings while your crew is on a roof or under a house. Some requests are outside your area. Notes live on paper, in a shared phone and in a scheduling app that do not talk to each other. A job is finished, and nobody asks for a review or books the maintenance visit. Meanwhile you may pay for ads that bring calls you cannot answer. More leads without a better process mean longer waits and weaker service.

Section: What we look at first

- How many calls are answered live, and how fast are missed calls returned?
- How are emergencies separated from routine work and sent to the right person?

- What does your office need to know to estimate or dispatch: address, issue, equipment, access, urgency?
- How many estimates are sent, accepted, scheduled, completed and paid?
- Which sources bring profitable jobs, not just many calls?
- Can your crews handle more work right now? Sometimes the first fix is not more leads.

Section: What you get

Your problem	What JobFlow puts in place
Calls are missed while crews are busy	Call tracking, answering coverage, a missed-call list with an owner and a callback time
Poor-fit requests waste time	Service-area pages, simple job questions, clear hours and emergency instructions
Booking takes too many steps	Mobile request form, booking or dispatch flow, confirmations and reminders
Leads and jobs live in different places	CRM or field-service connection with clear source and status
Estimates go quiet	Estimate tracking and an agreed follow-up schedule
You cannot judge your marketing	Reports down to booked and completed jobs and cost per qualified job
Reviews and repeat work are random	Post-job review request, maintenance reminders and a referral process

Section: How it works

1. **Discover.** We map services, coverage, call handling, dispatch, estimates and capacity. We agree what a lead and a job mean in your business.
2. **Design.** We set intake questions, routing and emergency escalation, booking rules and reporting. We match marketing to your real crew capacity.
3. **Implement.** We set up pages, calls, CRM or field-service links, booking, follow-up and reports. We train your office team and test normal and urgent cases.
4. **Improve.** We review answered calls, schedule fill, estimate follow-through, completed jobs and customer feedback, and adjust.

Section: What we measure

Call answer rate. Missed calls recovered within your agreed time. Share of requests that fit your service area and job types. Booking rate. Estimate acceptance. Completed jobs and revenue by source. Results are goals agreed after a baseline, never guaranteed.

Section: Our standards

- A trained person handles emergencies, safety concerns, estimates and customer questions.
- Automation acknowledges requests, collects basic job details, sends booking links and prompts callbacks. It does not make technical safety judgments or quote complex work without your approved rules.

Country note: JobFlow is currently designed for USA home service businesses. **If the visitor's country is set to Pakistan, show:** *JobFlow is designed for the US market today. If you run a service business in Pakistan, tell us your problem and we will build a Custom Solution using the same method.* Button: Tell Us Your Problem. **[CONFIRM: your brief says 3 solutions are for USA and 2 for Pakistan; JobFlow is the only one with a USA guide only.]**

Closing: Standard closing block, with the line *Foundation, Growth and Scale options. Pricing sent after your free call, in USD.*

7.4 PatientFlow page (/solutions/patientflow)

Label: Recommended Solution for Clinics

Headline: Turn patient demand into treatment.

Sub-headline: A patient-safe, measurable system that helps people find accurate information, reach the right person and attend an appropriate appointment.

Buttons: Book Free Call | Tell Us Your Problem

Section: The problem

Heading: Patients are looking. Access is hard.

Text: People find a clinic through local search, a doctor's referral, social media, a phone call or a WhatsApp message. They need to know: does the clinic offer this, where is it, when is it open, how do I book? If the answer is hard to find, the line is busy or a message waits a day, they choose someone else or delay care. The clinic sees calls and messages but cannot tell how many became booked, attended appointments. The goal is never to pressure anyone into treatment. It is to make accurate information and the right appointment easy to reach.

Section: What we look at first

- Which services, doctors and locations matter most?
- How quickly are calls and messages answered, including evenings, and are missed calls returned?
- Can patients easily find accurate hours, location, services, doctor details and booking options?
- How are urgent concerns separated from routine requests and handed to a qualified person?
- Which sources create attended appointments, not just clicks?
- What patient information is collected, where is it stored, and who can see it?

Section: What you get

Your problem	What PatientFlow puts in place
Patients cannot tell if you are the right clinic	Clear service pages, doctor information, location and payment guidance approved by your clinic
Nearby patients cannot find you	Accurate Google Business Profile, local search and service-area pages
Calls and messages are missed	A call-handling plan, a missed-call list with an owner, and a secure inquiry form
Booking takes too much effort	Online booking or request flow, confirmations and reminders

Staff repeat the same answers	Doctor-reviewed FAQs and preparation instructions
Follow-up depends on memory	Staff-owned reminders and administrative messages with opt-out choices
Leaders cannot see access	Reports by source, location, service, response, booking and attendance

Section: How it works

1. **Discover.** We map services, locations, staff roles, appointment capacity, privacy limits and the biggest access gap.
2. **Design.** We agree on accurate patient information, routing, booking steps, reminder choices, urgent-case escalation and privacy-safe measurement.
3. **Implement.** We set up pages, contact routes, booking, administrative workflows, reports and staff training. We test with fictional data before launch.
4. **Improve.** We review response, bookings and attendance with your leadership, and add channels only when your team has the capacity to support them.

Section: What we measure

Share of calls and messages answered in time. Missed calls returned. Appropriate requests that become booked appointments, and booked appointments that are attended. New patients by source and location. We start from your last 30 to 90 days when records are reliable. Results are goals, not guarantees.

Section: Our standards (show this prominently, it builds trust)

- Marketing and front-desk tools never diagnose or recommend treatment. Clinical decisions belong to qualified clinicians.
- Every medical claim and every piece of patient education is reviewed by a clinician at your clinic.
- No promises of cures. No overstated results. No pressure or false urgency.
- Only the minimum patient information is collected. We avoid sending identifiable health information to advertising tools.
- Automation handles administrative reminders and routing only.

Built for how you actually work

- **Pakistan:** Doctor referrals, WhatsApp as an approved administrative contact path, English and Urdu where patients prefer, after-hours replies, directions and fee information approved by the clinic.
- **USA:** Insurance and payment guidance, online scheduling, practice-management connections, single clinic or multi-location routing.

[CONFIRM before publishing: do not state that the service is "HIPAA compliant" or similar unless you can prove it. Use "privacy-aware" and "designed around your privacy rules" instead.**]**

Closing: Standard closing block, with the line *Foundation, Growth and Scale options. Pricing sent after your free call, in PKR or USD.*

8. Custom Solutions and Diagnosis page (/diagnosis)

Goal: Give every visitor whose problem does not fit a package a clear, easy door. This page also acts as a soft first step for people who are not ready to book a call. The page /solutions/custom should redirect here.

Hero

Headline: Tell us the problem. We will build the solution.

Sub-headline: Every business has problems. Yours may not fit a package, and that is fine. Describe what is going wrong in your own words. We diagnose it, then design a solution built only for you.

Buttons: Send My Problem (scrolls to the form) | Book Free Call

What "diagnosis" means here

Heading: Like a good doctor: understand first, treat second.

1. **Listen.** You tell us what is happening. No technical words needed.
2. **Find the cause.** We study how your business really works and find what is behind the symptom. Often it is not what you first thought.
3. **Design the solution.** We recommend exactly what to build and in what order. It may be a website, a system, an automation, a campaign, a tool, or a mix.
4. **Build and improve.** We build it, launch it, and keep improving it with real numbers.

Problems people bring us

Heading: Any of these sound like you?

Show these as clickable examples that fill the form's text box when clicked. They also make every industry feel welcome.

- "We get plenty of enquiries but few become customers."
- "Our team spends hours every week on copying data between systems."
- "We take orders by phone and WhatsApp and lose track of them."
- "People visit our online shop but abandon their carts."
- "Our students or members drop out after the first month."
- "We want to launch a new service and do not know where to start."
- "We have grown to 20 staff and our spreadsheets can no longer cope."
- "I think AI could help us, but I do not know where."
- "Something is wrong and I cannot explain it."

The form

Heading: Describe your problem. It takes two minutes.

Field	Type	Notes
Your name	Short text	Required
Business name	Short text	Required
Industry	Dropdown	Real estate, Home services, Clinics and health, Ecommerce and retail, Education and training, Restaurants and hospitality, Professional services, Manufacturing and distribution, Startup, Other
Country	Dropdown	Pakistan, USA, Other
What is the problem?	Large text box	Placeholder: *"For example: we get many enquiries but only a few turn into customers."*
What have you already tried?	Large text box	Optional

What would a good result look like?	Short text	Optional. Placeholder: *"More bookings, less manual work, a clear view of sales..."*
How soon do you want to act?	Dropdown	This month, in 1 to 3 months, just exploring
Best way to reach you	Choice	WhatsApp, phone, email. WhatsApp is the default in Pakistan; email in the USA.
Contact details	Short text	Required
Consent	Tick box	"I agree that Badar Edge may contact me about this enquiry. See our Privacy Policy."

Button: Send My Problem

Line under the button: Prefer to talk? [Book Free Call.]

After sending: what the visitor sees

Heading: Thank you. We have your problem.

Text: A real person from our team will read it and reply within **[CONFIRM: one business day]**. In the meantime, the fastest way to move forward is a free 15-minute call, where we can ask questions and start the diagnosis together.

Button: Book Free Call

What happens next

Heading: Three honest outcomes.

- **We can solve it.** We tell you what we would build and why, and send a written proposal with pricing for your industry and country.
- **We need to learn more.** We ask a few follow-up questions or suggest a slightly longer diagnosis session.

- **We are not the right fit.** We tell you plainly, and where possible point you to a better option. You will not be pushed into a service you do not need.

Closing block

Use the standard closing call-to-action from Section 3, but change the button order so the form is the first option: *Send My Problem* | *Book Free Call*.

9. Industries page (/industries)

Goal: Every visitor, in any industry, should finish this page thinking "this company understands my kind of business". The page does this by naming real problems per industry and by being honest about where we have ready-made systems and where we build custom.

Hero

Headline: Whatever you sell, customers can slip away.

Sub-headline: Different industries. The same few problems: enquiries not answered, work done by hand, marketing that cannot be measured, systems that cannot keep up. Here is how they show up in yours.

Buttons: Book Free Call | Tell Us Your Problem

Industries with a Recommended Solution

Three large cards. Each links to its solution page.

Industry	The problem we hear	Our system	Button
Real estate	"Leads come in from everywhere and we lose too many."	DealFlow	See DealFlow
Home services	"We miss calls while the crew is working."	JobFlow	See JobFlow
Clinics and health	"Patients find us but do not complete booking."	PatientFlow	See PatientFlow

Industries we build custom solutions for

Show these as a grid of smaller cards. Each card shows the industry name, a typical problem, and what we would look at first. The button on every card is **Tell Us Your Problem**.

Industry	A typical problem	What we would look at first
Ecommerce and retail	Visitors browse but do not buy; carts are abandoned; orders are handled by hand	Checkout journey, cart recovery, order and stock automation, campaign reporting
Education and training	Many enquiries, few enrolments; students drop out	Enquiry follow-up, enrolment flow, reminders, student communication
Restaurants and hospitality	Bookings and orders come by phone and chat; repeat visits are low	Booking and ordering flow, reminders, customer follow-up
Professional services (legal, accounting, consulting)	Referral-dependent, slow to respond, hard to show expertise	Enquiry handling, consultation booking, trust-building content
Beauty, wellness and fitness	Missed bookings, no-shows, weak repeat business	Booking system, reminders, membership and retention follow-up
Construction and interiors	Quotes drag on; leads are not tracked	Enquiry capture, quote follow-up, project pipeline view
Automotive	Enquiries and service bookings are scattered	Lead capture, service booking, follow-up and reviews

Manufacturing and distribution	Orders, stock and reporting live in spreadsheets	Order and inventory workflow, dealer or client portal, dashboards
Logistics and transport	Dispatch and customer updates are manual	Tracking, status messages, internal dashboards
Startups and new businesses	Need a brand, a website and a first system, fast	Brand and website, first sales system, simple tracking
Non-profits and associations	Donor and member communication is scattered	Donor or member database, communication flow, reporting
Software and tech companies	Slow sales follow-up, weak onboarding	Lead routing, onboarding automation, product-led marketing

Important for honesty: the typical problems above are examples of what each industry commonly faces, written as problems and not as claims of past work. Before launch, add a "worked with" note only to industries where you have real client work **[CONFIRM]**. The current site names dental clinics, real estate, ecommerce and startups as industries served.

The same problems, in every industry

Heading: Four problems, many names.

The problem	What it is called in different industries
Nobody replied fast enough	Missed call, unanswered message, lead left waiting, abandoned enquiry

Nobody owns the follow-up	Quote not chased, cart not recovered, patient not reminded, student not nudged
Nobody can see what works	Marketing report full of clicks but no customers
Too much is done by hand	Data entry, scheduling, order handling, reporting

Text under the table: If you recognise one of these, we can help, even if your industry is not on this page.

Both countries

Heading: Built for the way business is done where you are.

- **In Pakistan:** WhatsApp-first communication, English, Urdu and Roman Urdu, local payment and delivery realities, and pricing in PKR scoped for the local market.
- **In the USA:** Phone, email and booking-based flows, US time zones, and pricing in USD.

Don't see your industry?

Text: Then you are exactly who the Custom path is for. Describe your business and your problem. If we can help, we will build the solution. If not, we will tell you.

Button: Tell Us Your Problem

Closing block

Use the standard closing call-to-action from Section 3.

10. How We Work page (/how-we-work)

Goal: Remove the fear of the unknown. A visitor should see exactly what happens after they click Book Free Call, and feel that the method is calm, clear and fair.

Note: the Home page shows a shortened four-step version (Talk, Diagnose, Propose, Build and improve). This page shows the full five-step version below. They describe the same process.

Hero

Headline: Problem first. Then plan. Then build.

Sub-headline: No guessing, no surprise invoices, no disappearing after launch. Here is exactly how we work.

Buttons: Book Free Call | Tell Us Your Problem

The five steps

Step 1. Talk (free 15-minute call) You tell us about your business and what is not working. We ask questions. We tell you honestly where we think the biggest problem is and whether we can help. No sales pitch. *You leave with clarity even if you never hire us.*

Step 2. Discover We study how your business actually runs: where customers come from, who answers them, what happens next, and where people drop away. We look at real examples, not just opinions. We find the most expensive leak first. *You get: a clear picture of the real problem.*

Step 3. Design We plan the solution before building anything. We agree what to fix first, who owns what, which tools are truly needed, and how success will be measured. You receive a written proposal with scope, timeline and pricing for your industry and country, in PKR or USD. *You get: a plan you can say yes or no to, with nothing hidden.*

Step 4. Implement We build and connect the agreed pieces: websites, systems, automations, content, reports. You see progress along the way and we test with real scenarios before launch. We train your team. *You get: a working solution, not just a delivered file.*

Step 5. Improve Launch is the start, not the end. We review the numbers with you, fix what is not working and shift effort to what is. *You get: a solution that keeps getting better, with reports you can understand.*

Our six working principles

1. **Diagnose before we sell.** We will not recommend what we have not tested against your real problem.
2. **Fix the process before buying tools.** Software cannot repair a broken process.
3. **People stay in charge.** Automation and AI handle repeat work. People handle judgment, advice and sensitive moments.
4. **Measure what matters.** We report conversations, bookings, jobs and deals, not only clicks and impressions.
5. **You own it.** Your accounts, your data, your assets stay yours. **[CONFIRM before keeping this line.]**
6. **Honest about limits.** We tell you what we cannot do, and we never promise guaranteed results.

What we need from you

Heading: A good result is a team effort.

- One decision-maker who can say yes.
- One person who knows the daily process well.
- Access to your current systems and accurate information about your products, services, prices and availability.
- A little time each week to review progress and give feedback.

How we keep you informed

- A named contact on our side.
- Regular progress updates **[CONFIRM: weekly or fortnightly]**.
- A simple report each month in plain language.
- Direct support by WhatsApp or email **[CONFIRM: response times]**. In the USA view, show email and phone first.

What we never do

- We never pressure you to sign on the call.
- We never hide third-party costs. Advertising spend, software subscriptions, call and messaging charges are shown separately in the proposal and, wherever possible, stay in your own accounts.
- We never invent facts about your business, your products or your customers.
- We never promise specific results in advance.

Closing block

Use the standard closing call-to-action from Section 3.

11. Results page (/results)

Goal: Prove we deliver. Proof converts better than any promise. But proof must be **real**. A claim that cannot be shown can cost you a client and your reputation, so this page is written to work honestly even while your set of case studies is small.

Hero

Headline: What changes when the right problem gets solved.

Sub-headline: Real businesses. Real problems. What we built and what happened.

Button: Book Free Call

Headline numbers (optional strip)

Show at most four numbers, and only those you can back up with records. The current site claims the figures below. I have **not** treated them as confirmed. Check each one before it is shown.

Claim on current site	Status	What to do
60+ projects delivered	**[CONFIRM]**	Count only completed client projects
5.0 average client rating	**[CONFIRM]**	Show only if it comes from a visible source (reviews, survey)
350+ automation workflows running live	**[CONFIRM]**	Be ready to explain what counts as a workflow
+48% average client revenue growth	**[CONFIRM, high risk]**	Revenue claims are hard to prove. Remove unless documented per client
Speed to lead under 1 minute	**[CONFIRM]**	Say "in our systems" or "for clients using..." so it is accurate
Most clients see movement in 30 to 60 days	**[CONFIRM]**	Soften to "many clients" unless you have the data

If you cannot confirm a number, use a true, softer line instead, for example: *"Every engagement ends with a scorecard you can read in two minutes."*

Case studies

Show two to four. Each uses the same format so visitors can scan.

Case study format

- **Client:** industry, city or country (name only if the client agrees)
- **The problem:** two sentences in the client's own words if possible
- **What we found:** the real cause
- **What we built:** the solution, named by type (Recommended, Custom or Traditional)
- **What changed:** two or three numbers with the time period, for example *"Missed calls recovered within 15 minutes rose from 30% to 85% over 90 days"* (this is a format example, not a real result)
- **Time taken:** how long from first call to launch
- **Quote:** one sentence from the client
- Button: **Book Free Call** ("Have a problem like this?")

Candidate stories from the current site (use only with client permission and verified numbers **[CONFIRM]**):

1. Dental clinic: online appointments rose. Becomes a PatientFlow-style story.
2. Real estate team: qualified leads rose. Becomes a DealFlow-style story.
3. Ecommerce brand: conversion rate rose. Becomes a Custom or Traditional story.

Client words

Show two to three short testimonials. Each shows the person's name, role, business and country or city. The current site mentions clients in Texas, Florida and Miami; use only quotes you have written permission to publish. Never invent or lightly edit a quote to sound stronger.

"No case study for my industry yet?"

A young company will not have a case study for every industry. Be honest about it, and turn it into a reason to call.

Heading: Your industry not here yet?

Text: We are always building new solutions around real businesses. If yours is not shown, it does not mean we cannot help. It means we will study your problem closely first. Book a call and we will tell you honestly what we would do.

How we report results

Heading: Every project ends with a scorecard.

Text: We agree what to measure at the start. We record a baseline from your recent history. We compare the same things over time and show you in plain language. We report what changed, what did not, and what we will try next. Results depend on your market, your team and your capacity, so we never promise a specific number in advance.

Evidence checklist for your team (internal, not for the site)

- Written permission from each client for any name, quote, logo or number.
- A saved record behind every figure: screenshot, report, export or signed note.
- The time period for every result.
- A rule: no "average" figure unless you can show how it was calculated.

Closing block

Use the standard closing call-to-action from Section 3.

12. Pricing page (/pricing)

Goal: Visitors will look for prices. If there is no Pricing page, they suspect something is hidden. This page shows prices are **coming, not hidden**, explains why, and moves the visitor to the call. It shows no amounts.

Hero

Headline: Pricing that fits your problem, not a price list that fits nobody.

Sub-headline: We quote after we understand your business. Here is how it works and what to expect.

Button: Book Free Call

Why we do not publish a price list

Heading: Two businesses with the same name for their problem can need very different work.

Text: A clinic with one location and a clinic group with six are not the same job. A real estate agent with one listing channel and a developer with ten projects across three cities are not either. A fixed price on a web page would be too high for some and too low for others. So we first listen, then recommend, then quote, so you only pay for what your problem needs.

What decides the price

- The size of the problem: one team or many, one location or several.
- Volume: how many enquiries, calls, orders or users.
- The channels involved: phone, WhatsApp, web, social, portals, email.
- Systems to connect: CRM, booking, accounting, field-service or practice software.
- Content and language needs: for example English plus Urdu or Roman Urdu.
- How much ongoing support and improvement you want after launch.

What you will receive after the call

Heading: A written proposal for your industry and your country.

1. A short summary of the problem we found.
2. The solution we recommend, and why. For Recommended Solutions: the level (Foundation, Growth or Scale).
3. What is included and what is not.
4. A timeline.
5. The price, set out in clear parts (below).
6. The measures we will use to judge success.

We aim to send it within **[CONFIRM: two business days]** of your call. There is no deadline to answer.

How the price is shown

Part	What it covers
One-time setup	The diagnosis, design and build of your solution
Ongoing service (optional)	Monthly improvement, support and reporting after launch
Third-party costs, shown separately	Advertising spend, software subscriptions, phone and messaging charges, listing-portal fees. Wherever possible these stay in your own accounts.

Currency and local fairness

- **Pakistan:** Quoted in PKR and scoped for the local market, team and channels. We do not convert US prices.
- **USA:** Quoted in USD.

Three levels for Recommended Solutions

Show the same three levels used on the solution pages, without prices.

Level	Best for
Foundation	One team or location with a clear problem
Growth	Several sources, services or channels that need consistent handling and monthly improvement
Scale	Many teams, locations or a high volume, with deeper connections and coordinated improvement

Custom and Traditional work

Text: Custom and Traditional projects are quoted as a clear project fee, a monthly fee, or a mix, depending on the work. You will always know what you are paying for before you agree. **[CONFIRM your actual models.]**

Questions people ask about price

- **Is the call really free?** Yes. No cost, no commitment, no card needed.
- **Will you tell me the price on the call?** We will give you a rough sense of the type of solution that fits. The exact figure comes in writing so it is accurate.
- **Is there a hidden fee later?** No. Third-party costs are listed separately in the proposal so you can see every one.
- **Do I pay for the diagnosis? [CONFIRM: decide whether a deeper diagnosis is free, or included in the setup fee, or paid. State it here in one clear sentence.]**

Closing block

Use the standard closing call-to-action from Section 3.

13. About page (/about)

Goal: Build trust. A visitor deciding whether to give a stranger access to their business wants to know who is behind the company and what they stand for. Keep it short, human and specific.

Hero

Headline: We are the Problem-First Solutions Company.

Sub-headline: We started Badar Edge because too many businesses were sold services they did not need, while the real problem stayed unsolved.

Our story (draft, to be personalised)

Use this draft and replace the bracketed parts with true details from your founders.

> Most businesses do not have a marketing problem or a website problem or a software problem. They have a business problem, and the marketing, the website or the software is only where it shows up. [Founder name] saw this again and again [CONFIRM: short true story, for example a first client or a past job]. Agencies would sell what they were good at, not what the business needed. So we built Badar Edge the other way round. We start with the problem. Then we use whatever it takes to fix it: design, development, marketing, automation or AI. Since [CONFIRM: year, the current site implies 2025] we have worked with businesses in Pakistan and the USA, from first-time founders to growing teams.

What we believe

1. **Every business has problems. The right ones are worth solving first.** Fix the one that costs most.
2. **Diagnosis beats guessing.** A solution built on a wrong guess is an expensive mistake.
3. **Technology serves the process, not the other way round.** Tools come after the plan.
4. **People matter most.** Customers, patients, buyers and clients are people. Our systems help businesses treat them well, never pressure them.
5. **Honesty wins.** We say what we can do, what we cannot, and we do not promise results nobody can guarantee.

What we do, in one paragraph

We provide every service a business may need, whether it is new, wants to grow or wants to scale: brand and design, websites and software, marketing, sales systems, automation and AI, data and reporting. We offer it in three ways: **Recommended Solutions** (ready-designed systems), **Custom Solutions** (built from your problem), and **Traditional Solutions** (single services). All three start with a diagnosis.

Where we work

Text: We serve businesses in **Pakistan** and the **USA**, and we price and plan for each market locally. **[CONFIRM: office or team location, and whether to show a city.]**

The team

A short section of three to six faces with name, role and one line about what each person solves. Use real photos, not stock images.

For each person: name, role, one sentence in plain words, for example: *"Leads our diagnosis calls. Likes finding the one thing that is quietly costing a business money."* **[CONFIRM: team members and photos.]**

How we work with you (three short promises)

- You talk to real people.
- You see plain-language reports.
- You stay in control of your business and your data.

Closing block

Heading: Let's find your problem.

Use the standard closing call-to-action from Section 3.

14. Book Free Call page (/book-call) and Thank You page (/thank-you)

Goal: This is the page where visitors become leads. Keep it clean: no menu clutter, one job, as few fields as possible.

14.1 Book Free Call page

Headline: Book your free 15-minute strategy call.

Sub-headline: Tell us what is holding your business back. We will listen, name the problem that matters most, and tell you honestly how we can help.

Layout: Left side: the promise and reassurance. Right side: the form and calendar. On mobile: promise first, then form.

Left side: what you get on the call

- A clear view of where your business is likely losing the most.
- An honest answer on which type of solution fits: Recommended, Custom or Traditional.
- No pitch, no pressure, no obligation.
- A written proposal afterwards, with pricing for your industry and country.

Small reassurance line: Free. 15 minutes. No card needed.

Form fields (keep to six)

Field	Notes
Your name	Required
Business name	Required
Country	Pakistan or USA. Pre-filled from the country switch. Changes the time zone and contact options.
Industry	Dropdown, with "Other"
In one line, what is the problem?	Short text. Placeholder: *"For example: we miss calls and lose clients."* This makes the call far more useful.
WhatsApp or phone, and email	Required. WhatsApp shown first for Pakistan.

Then the visitor picks a time from the calendar. Show times in the visitor's own time zone. Include a small note: *"Prefer to message first? [Send us your problem instead.]"* (links to /diagnosis).

Button: Confirm My Free Call

Consent line under the button: By booking, you agree that Badar Edge may contact you about this call. See our Privacy Policy.

14.2 Thank You page

Headline: You are booked. We look forward to it.

Text: Your free call is confirmed for **[date and time]**. A confirmation is on its way to your WhatsApp or email.

What happens next

1. **Before the call:** You get a reminder. If you have a minute, think about the one problem that costs you most.
2. **On the call (15 minutes):** We listen, ask questions and tell you honestly what we see.
3. **After the call:** We send you a written proposal with pricing for your industry and country.

Optional: *Want to make the call even more useful? [Tell us a bit more about your business.]* (links to a short optional form).

Need to change the time? Link to reschedule.

14.3 Messages to send around the call

These messages are part of conversion. Most booked calls are lost to forgetting, not to lack of interest. Draft them in plain, friendly language. Pakistan clients get them by WhatsApp first; USA clients by email, with text message optional if they agreed.

When	Purpose	Draft
Right after booking	Confirm	"Hi [Name], your free 15-minute call with Badar Edge is confirmed for [date, time, time zone]. We'll listen to your business and tell you honestly how we can help. Need to change the time? [link]"
24 hours before	Remind	"Hi [Name], a quick reminder about our call tomorrow at [time]. One thing that helps: think about the one problem that costs your business most right now."
1 hour before	Remind	"Hi [Name], we speak in an hour at [time]. Here is the link: [link]. See you then."
If they miss it	Re-book kindly	"Hi [Name], we missed you today. No problem, things get busy. Here is a link to pick a new time: [link]."
After the call	Send recap	"Hi [Name], thank you for your time. As promised, here is a short summary of what we discussed and the next step. Your written proposal will follow by [date]."

All messages respect the person's contact preference and include a way to opt out. Staff, not software, sends the after-call recap.

14.4 What to measure on this page

- Visitors to the page, form starts, form completions, calls booked, calls attended.
- The source of each booking: which page, which ad, which country.
- Share of booked calls that are attended. If it is low, strengthen the reminders.

15. FAQ page (/faq)

Goal: Answer the doubts that stop people from booking. Show the grouped questions as simple expanding rows. Keep each answer to two to four sentences. Use the first four questions on the Home page.

Headline: Questions, answered plainly.

Button at the end: Still have a question? Ask it on the free call. Book Free Call

About the call

What does the call cost? Nothing. The 15-minute strategy call is free, with no commitment and no card needed.

What happens on the call? You tell us about your business and what is not working. We ask questions and tell you honestly where we see the biggest problem and which type of solution would fit. If we are not the right fit, we say so.

Do I need to prepare anything? No. It helps to think about the one problem that costs you most right now. That is all.

Will you try to sell me something on the call? No. The call is for understanding and honest advice. You receive a written proposal afterwards and decide in your own time.

About working with us

What does "problem-first" mean? Most agencies begin with what they sell. We begin with what is going wrong in your business. We find the real cause, then choose the right tools: design, development, marketing, automation or AI.

Do you only work with certain industries? No. We have ready-designed systems for real estate, home services and clinics, and we build custom solutions for any other industry. If your business has customers and a process, we can look at it.

What if my problem is not on your list? Then use the Custom path. Describe your problem on our Diagnosis page. If we can solve it, we will design a solution. If not, we will tell you.

Are you a big agency? We are a focused solutions company, not a large agency with a long list of unrelated services. We bring in specialists when your problem needs them. **[CONFIRM: wording on team size.]**

Can I work with you on a single service, like a website? Yes. Traditional Solutions are for exactly that. Even then, we first check that the service will solve a real problem for you.

About the three Solution Types

What is the difference between Recommended, Custom and Traditional?

- Recommended: a ready-designed system, adapted to your business. Today: DealFlow, JobFlow and PatientFlow.
- Custom: a solution designed from scratch for your specific problem.
- Traditional: any single service you already know you need.

Which one should I choose? You do not have to decide. Book the call and we will help you choose.

Can I start with one and move to another? Yes. Many projects start small and grow once the real problem is clear.

About pricing

Why are there no prices on the website? Because the right solution depends on your size, volume, channels and tools. A fixed price on a web page would be wrong for most people. After the call, we send a written proposal with pricing for your industry and country.

What currency do you charge in? Pakistani clients are quoted in PKR, scoped for the local market. USA clients are quoted in USD.

Are there hidden costs? No. Advertising spend, software subscriptions, phone and messaging charges and similar third-party costs are shown separately, so you see every one.

About results and expectations

What results can I expect? We agree what to measure at the start, record a baseline from your recent history, and report plainly on what changes. Results depend on your market, your team and your capacity, so we do not promise specific outcomes in advance.

How long until I see a difference? It depends on the problem. Some fixes, such as faster follow-up, show within weeks. Others take longer. We give you a realistic timeline in the proposal. **[CONFIRM: only keep the current site's "30 to 60 days" line if you have data.]**

About countries and languages

Do you work with clients in Pakistan and the USA? Yes. We price, plan and communicate for each market locally. In Pakistan we support WhatsApp-first communication and English, Urdu and Roman Urdu where useful.

What time zone will the call be in? Your own. The calendar shows times in your time zone.

About AI, data and ownership

Will AI replace my team? No. We use AI for repeat work such as sorting enquiries, drafting messages, reminders and reports. A trained person handles advice, sensitive moments and anything important, and checks AI output.

Who owns the accounts, data and work you build? You do. **[CONFIRM before publishing: the current site says "full client ownership, no lock-in". State the exact terms.]**

How do you handle our private information? We collect only what is needed. For sensitive sectors such as clinics, we design around your privacy rules and keep clinical information in your approved systems. Our Privacy Policy explains more.

Closing block

Use the standard closing call-to-action from Section 3.

16. Insights, Contact and legal pages

16.1 Insights page (/insights), phase 2

Build this after the first clients are booking. Its job is to bring in people who are searching for answers to their problem, before they know they need you. It is not a general blog. Every article is written around one problem, and ends with the standard call-to-action.

Page headline: Practical answers to business problems.

Page sub-headline: Short, plain guides on getting more clients, saving time and fixing the systems behind your business.

Article rules: 700 to 1,200 words. Plain English. One problem per article. A short "what to do first" box. Ends with Book Free Call or Tell Us Your Problem.

First twelve article ideas

#	Title	Problem it answers	Links to
1	Why leads go cold in the first hour, and what to do about it	Slow response	DealFlow, JobFlow, PatientFlow
2	Five signs your marketing is working, and five signs it only looks busy	Cannot measure marketing	Custom
3	The missed-call problem: what each missed call really costs a service business	Missed calls	JobFlow
4	How to answer property inquiries on WhatsApp without losing control	Messy inquiry channels (Pakistan)	DealFlow
5	What a clinic's front desk should and should not do with patient messages	Patient access and safety	PatientFlow
6	Before you build a website: ask these seven questions	Wasted website spend	Traditional
7	Where AI helps a small business, and where it should not be used	AI confusion	Custom, Traditional
8	The one-page scorecard every owner should look at weekly	No visibility	Custom

9	How to tell if you need a CRM, or just better habits	Tool-first thinking	Custom
10	Quote sent, nobody replied: a simple follow-up routine	Lost estimates	JobFlow, Custom
11	Starting a business in 2026: what to build first	New business	Traditional, Custom
12	Doing business in both Pakistan and the USA: what changes online	Two markets	About, Industries

16.2 Contact page (/contact)

Headline: Let's talk about your problem.

Sub-headline: The fastest way to start is a free 15-minute call. You can also message us.

Main button: Book Free Call

Other ways to reach us

Option	Pakistan view	USA view
WhatsApp	Shown first, with a button	Shown after email
Email	Shown	Shown first
Phone	**[CONFIRM number]**	**[CONFIRM number]**

Social	LinkedIn, Instagram	LinkedIn, Instagram

Short form: name, email or WhatsApp, and a message. Send button: *Send Message*.

Response promise: *We reply within one business day.* **[CONFIRM before publishing.]**

Business hours and time zones: [CONFIRM.] The current site shows no email or phone on the pages that were read, so these details must be supplied.

16.3 Privacy Policy and Terms

These must be written or reviewed by a qualified lawyer in each country you serve. The points below tell your lawyer what the website actually does.

Privacy Policy should cover

- What the site collects: names, business details, contact details, the problem described, and booking information.
- How it is used: to respond, to book calls, to send the written proposal, and to improve the site.
- Contact channels and consent: WhatsApp, email, phone, and how to opt out.
- Analytics and advertising tools, and a cookie notice with clear choices.
- Who sees the data: your team and named service providers (booking, email, CRM).
- How long data is kept, and how a person can ask to see or delete their data.
- A plain statement that the site is not for sending sensitive health or financial details.

Terms should cover

- Use of the website; information is general and not a guarantee of results.
- A free call is information only; a project begins only with a signed proposal.
- Ownership and third-party costs are set out in each proposal.

16.4 Small pages and messages

404 page: *"This page took a wrong turn. Let's get you back. [Home] [Book Free Call]"*

Cookie notice: *"We use cookies to understand how the site is used. You choose which ones."* Buttons: Accept all | Choose | Decline.

17. Pakistan and USA localisation, SEO, tracking and build notes

17.1 One site, two markets

Use one website with a country switch, not two sites. The same words work for both, with small differences.

Area	Pakistan	USA
Spelling	Simple English; either spelling style is fine, but stay consistent	US English
Currency	PKR; scoped for the local market	USD
First contact channel	WhatsApp	Email and booking calendar; phone second
Languages	English; Urdu or Roman Urdu support noted where relevant	English; Spanish on request **[CONFIRM]**
Examples in copy	Projects and installment plans, clinics with doctor referrals, WhatsApp inquiries	Brokerages and agents, HVAC and plumbing crews, clinic groups, online booking
Time zones on calendar	Pakistan Standard Time	US time zones
Testimonials and cases	Show Pakistani clients first	Show US clients first
Solution pages	DealFlow and PatientFlow available; JobFlow shows the "tell us your problem" note	DealFlow, JobFlow and PatientFlow all available

Tone rule: the same warm and direct voice in both markets. Never use a heavier or more formal voice for Pakistan, and never use slang for the USA.

17.2 Page titles and descriptions for search

Keep titles under 60 characters and descriptions under 155 characters.

Page	Page title	Meta description
Home	Badar Edge: Problem-First Solutions for Business	Tell us your business problem. We find the cause and build the solution: design, development, marketing, automation and AI.
Solutions	Three Ways to Solve Your Business Problem	Recommended systems, custom solutions or single services. Pick the path that fits and book a free 15-minute call.
Recommended	DealFlow, JobFlow, PatientFlow Systems	Ready-designed systems that turn enquiries into deals, jobs and patient appointments. Adapted to your business.
DealFlow	DealFlow: Real Estate Lead-to-Deal System	Stop losing property leads. One clear path from inquiry to visit to deal, for agencies, developers and brokerages.
JobFlow	JobFlow: Lead-to-Job System for Home Services	Every missed call is a missed job. Turn calls and requests into booked, completed jobs for HVAC, plumbing and more.
PatientFlow	PatientFlow: Patient Access System for Clinics	Help patients find accurate information and attend the right appointment. Measurable, respectful, patient-safe.

Traditional	Web, Marketing, Automation and AI Services	Design, development, marketing, sales systems, automation and AI, delivered by specialists and tied to results.
Diagnosis	Tell Us Your Business Problem	Describe what is going wrong. We diagnose it and design a solution built only for you.
Industries	Business Solutions by Industry	Real estate, home services, clinics, ecommerce, education and more. Same problems, solved your way.
How We Work	How We Work: Problem First	A free call, a diagnosis, a clear plan, then build and improve. See every step before you start.
Results	Client Results and Case Studies	Real problems, what we built and what changed. Every project ends with a scorecard.
Pricing	How Our Pricing Works	Pricing built for your problem, quoted in PKR or USD after your free call. No hidden costs.
About	About Badar Edge	The Problem-First Solutions Company, serving businesses in Pakistan and the USA.
FAQ	Frequently Asked Questions	Answers about the free call, pricing, solutions, results, AI and data ownership.
Book Call	Book a Free 15-Minute Strategy Call	Tell us what is holding your business back. Free, no commitment, no card needed.

Keyword themes to use naturally in headings: business problem solutions, lead follow-up system, real estate lead management, home service lead system, clinic patient booking system,

business automation, AI for business, custom business software. Pakistan pages may add city names later (Karachi, Lahore, Islamabad). US pages may add states or metro areas. Do not stuff keywords; plain words convert better.

17.3 What to track

Track the funnel from the first visit to an attended call.

1. Visits, by page and by country.
2. Clicks on **Book Free Call**, by page.
3. Booking form started, and completed.
4. Calls booked, and calls attended.
5. Diagnosis form completed.
6. Proposals sent, accepted.

If calls booked is high and calls attended is low, fix the reminders. If form starts are high and completions low, shorten the form. If visits are high and clicks low, strengthen the headline and the closing block.

17.4 Writing rules for the whole site

- Short sentences. One idea each. Aim for the reading level of a 12 to 14 year old.
- Lead with the visitor's problem. Talk about us second.
- Use "you" and "we". Avoid "clients" and "stakeholders" when speaking to the reader.
- Avoid: *synergy, holistic, cutting-edge, end-to-end, leverage, robust, game-changing, 10x*.
- Never promise a result. Use "we aim to", "we measure", "we agree targets after a baseline".
- Say what AI does and what a person does.
- Every page ends with the same closing block, so the next step is always clear.
- Do not claim a certification, compliance status, client name or number you cannot prove.

17.5 Design notes for the person building the site

- Mobile first. Most Pakistani visitors, and many US ones, arrive on a phone.
- Fast pages. A slow page loses the visitor before the headline appears.
- One primary button style, used only for Book Free Call.
- Plenty of white space. Short paragraphs. Icons only if they add meaning.
- Use real photos and real screenshots. No generic stock photos.
- Readable in both English left-to-right and, later, Urdu right-to-left if you add Urdu pages.

17.6 Decisions you still need to make

Every **[CONFIRM]** in this document is listed here. Close these before the site goes live.

#	Decision	Where it appears
1	Which headline figures and case studies are real and can be published	Home, Results
2	Client permission for names, quotes and logos	Results
3	Exact ownership and no-lock-in terms	Trust strip, How We Work, FAQ
4	Whether a deeper diagnosis after the call is free, included in setup, or paid	Pricing
5	Pricing models for Custom and Traditional work	Pricing
6	How fast we send the proposal and reply to messages	Pricing, Diagnosis, Contact
7	Updates rhythm and support response times	How We Work
8	Phone numbers, email, WhatsApp, social links, office location	Footer, Contact
9	Team names, roles and photos; founder story and company start year	About
10	Whether to offer a Pakistan version of JobFlow, or keep the "tell us your problem" note	JobFlow page

11	Wording on privacy and compliance for clinics (avoid claiming HIPAA or similar unless true)	PatientFlow, FAQ
12	Spanish support for USA visitors	Global elements, localisation
13	Lawyer review of Privacy Policy and Terms in each country	Legal pages
14	Which booking, CRM and messaging tools to use	Book Call page

17.7 Suggested build order

1. Home, Book Free Call, Thank You.
2. Solutions hub, Recommended hub, DealFlow, JobFlow, PatientFlow.
3. Diagnosis, Traditional, Industries.
4. How We Work, Pricing, About, FAQ.
5. Results (as soon as real cases are ready), Contact, legal pages.
6. Insights (phase 2).

For a first launch, the first four steps are enough to start converting visitors.
